Appendix: Examples of Abstracts

JOURNAL SCOPE

The Journal of Physical Chemistry A/B/C is devoted to reporting new and original experimental and theoretical basic research of interest to physical chemists, biophysical chemists, and chemical physicists. Review and Feature Articles, which include extensive discussions on previously published literature, are by invitation only (please refer to the next section on Manuscript Types).

An essential criterion for acceptance of research articles in the journal is that they provide **new physical insight**. Manuscripts that are essentially reporting data or applications of data are, in general, not suitable for publication in *JPC A/B/C*.

JPC A (Isolated Molecules, Clusters, Radicals, and Ions; Environmental Chemistry, Geochemistry, and Astrochemistry; Theory)

- A1 Kinetics and Dynamics
- A2 Spectroscopy, Photochemistry, and Excited States
- A3 Environmental, Combustion, and Atmospheric Chemistry;
Aerosol Processes, Geochemistry, and Astrochemistry
- A4 Molecular Structure, Quantum Chemistry, and General Theory

JPC B (Biophysical Chemistry, Biomaterials, Liquids, and Soft Matter)

- B1 Biophysical Chemistry and Biomolecules
- B2 Biomaterials, Surfactants, and Membranes
- B3 Liquids; Chemical and Dynamical Processes in Solution
- B4 Glasses, Colloids, Polymers, and Soft Matter

JPC C (Energy Conversion and Storage, Optical and Electronic Devices, Interfaces, Nanomaterials, and Hard Matter)

- C1 Energy Conversion and Storage; Energy and Charge Transport
- C2 Surfaces, Interfaces, Porous Materials, and Catalysis
- C3 Plasmonics, Optical Materials, and Hard Matter
- C4 Physical Processes in Nanomaterials and Nanostructures

Guidelines for Nanomaterial Papers

To be appropriate for publication in *JPC A/B/C*, nanomaterial papers should demonstrate an improved understanding of a physical process. Papers that emphasize nanomaterial synthesis and characterization are not appropriate for the Journal.

Guidelines for Theory Papers

To be appropriate for publication in *JPC A/B/C*, theory papers must satisfy at least one of the following criteria:

1. provide significant new physical insight into an experimentally relevant system or process
2. present a new theoretical or computational methodology of general interest

MANUSCRIPT TYPES

Note that all Letters or Communications should be submitted to *The Journal of Physical Chemistry Letters*.

Articles should report original research having significant new physical insight that is expected to have a definable impact on the advancement of science, technology, and the field of physical chemistry. Manuscripts should cover the research with thoroughness and clarity but should be as concise as possible. Articles are scheduled for publication in the order of acceptance within limitations of available space. A table of contents (TOC) graphic is required for use in the Web edition of the journal.

Feature Articles are usually published by invitation. However, authors in important and active research fields of interest to physical chemists are encouraged to propose such articles.

Two-page proposals should be sent to the Deputy Editors of the corresponding journal section for consideration. Contact information for the Deputy Editors can be found on the masthead of each journal section.

For Feature Article submissions, the author should provide a clear, concise, and critical status report of the field as an introduction to the article. The author's own contribution and its

relationship to other work in the field should constitute the main body of the article. Controversies, if they exist, should also be outlined. Possible future directions and the significance of the research area to the field of physical chemistry should be pointed out. Feature Articles are limited to ~8 printed pages (equivalent to ~40 pages of double-space-typed text with figures, tables, references). A brief biography for each author of the Feature Article must be included. Photograph(s) may also be included with the biography. A TOC graphic is required for use in the Web edition of the journal.

Review Articles are strictly reviews of active and rapidly changing fields with little or no new data reported. They are ~8 pages long (~40 typed pages). Authors are encouraged to submit two-page proposals to the Deputy Editor of the corresponding journal section for consideration. A brief biography for each author of the Review Article must be included. Photograph(s) may also be included with the biography. A TOC graphic is required for use in the Web edition of the journal.

Comments are significant remarks on work previously published (usually in *JPC A/B/C*) and are restricted to approximately one page (1000 words or equivalent) including tables, figures, and text. There is no abstract. Comments are subject to critical review. If Comments are concerned with the work of other authors, the Editors will generally permit those authors to reply if approved by the Reviewers. It is essential that the discussion focus on scientific issues in both the Comment and the Reply.

Additions and Corrections may be used to address important issues or correct errors and omissions of consequence that arise after publication of an article. Additions and Corrections may be requested by the author(s) or initiated by the Editor after discussions with the corresponding author. Readers who detect errors of consequence in the work of others should contact the corresponding author of that work. All Additions and Corrections are subject to approval by the Editor, and minor corrections and additions will not be published. Additions and Corrections from authors should be submitted via the ACS Paragon Plus environment by the corresponding author for publication in the “Addition/Correction” section of the Journal. The corresponding author should obtain approval from all of the article coauthors prior to submitting an Addition and Correction or provide evidence that such approval has been solicited. The Addition and Correction should include the original article title and author list, citation including DOI, and details of the correction. For proper formatting, see examples in a current issue of the Journal.

Retractions. Articles may be retracted for scientific or ethical reasons. Articles that contain seriously flawed or erroneous data such that their findings and conclusions cannot be relied upon may be retracted in order to correct the scientific record. Retractions may be requested by the article author(s) or by the journal Editor(s), but are ultimately published at the discretion of the Editor. When an article is retracted, a notice of Retraction will be published containing information about the original article title, author list, and the reason for the Retraction. Retracted articles will be accompanied by the related Retraction notice and will be marked as “Retracted”. The originally published article will remain on the web except in extraordinary circumstances (e.g. where deemed legally necessary or if the availability of the published content poses public health risks). The American Chemical Society follows guidance from the Committee on Publication Ethics (COPE) when considering retractions; for more information see: <http://publicationethics.org/>.

Special Issues are published throughout the year. These issues may be a Memorial, Festschrift, or collection of papers from a Meeting or Symposium. *JPC A/B/C* also publishes Special Sections, which are placed at the front of an issue (followed by regular journal content). Suggestions for Special Issue or Special Section topics may be directed to the Deputy Editors of the corresponding journal section. As a general guideline, full Special Issues contain at least 40 Articles, and Special Sections have approximately 20 Articles.

MANUSCRIPT PREPARATION

Manuscript Format

Manuscripts must be prepared using accepted word-processing software, and all parts must be double-spaced. All pages must be numbered consecutively starting with the title page and including tables and figures. A standard font, in a size of 12 points or greater, must be used.

Standard American English usage is required. Authors who are not familiar with standard American English are urged to seek assistance; deficiencies in grammar may be a serious hindrance during the review process. For more information, authors may visit the [Language Editing Services](#) listed under the Publishing Tools tab of the author & Reviewer Resource Center.

The ACS Style Guide (3rd ed., 2006; ISBN 13:9780841239999) is available at <http://pubs.acs.org/page/books/index.html>. The Third Edition is the definitive source for all information needed to write, review, submit, and edit scholarly and scientific manuscripts. Refer to a current issue of the Journal for general style.

The various sections of the manuscript should be assembled in the following sequence:

- Title, Authorship, and Affiliations (single page)
- Manuscript Title (in Title Case)
- Abstract (single page)
- Introduction
- Experimental and/or Theoretical Methods (including embedded Figures, Figure Captions, and Tables)
- Results and Discussion (including embedded Figures, Figure Captions, and Tables)
- Conclusions
- Acknowledgment/Dedication
- Supporting Information Description
- References (Manuscript titles should be provided and they should be in title case or sentence case. Mixed cases are not acceptable.)
- Table of Contents Image (at the beginning or end of the manuscript) and labelled accordingly.
- Author Biographies (for Feature Articles & Review Articles only)

- Supporting Information: submitted as separate files and not repeated in the manuscript (proposed cover art images should be submitted as Supporting Information for Review Only)

Title

The title should be specific and informative and be in Title Case. Using keywords in the title assists in effective literature retrieval. The title, authorship, and institutional affiliations should be included on a single page. Avoid using common phrases such as “investigation”, “study,” “demonstration”, or “performance evaluation”, uncommon acronyms, and words such as “First”, “Novel”, “Facile”, and “One Pot” in the title and abstract.

Authorship

Be consistent in authorship designation on the manuscript and on all correspondence. First name, middle initial, and last name are preferred for correct identification, but omit titles. Give the complete mailing address of the institution where the work was conducted and identify the affiliation of each author. If the current address of an author is different, include it in a footnote on the title page. The corresponding author to whom inquiries about the paper should be addressed must be marked with an asterisk; provide the telephone number, fax number, and e-mail address of this correspondent.

Abstract

The abstract should be a clear, concise, one paragraph summary (100–200 words). It should be informative rather than descriptive, giving scope, purpose, experimental approach, significant results, and major conclusions. Do not cite references, tables, figures, or sections of the paper in the abstract. Do not use graphics, equations, or tables in the Abstract because this material will not display in secondary sources (e.g., *Chemical Abstracts*). Abbreviations and acronyms should be defined upon first usage. Authors’ abstracts are used directly for *Chemical Abstracts*. Follow the recommended format when preparing the abstract. Representative abstracts are shown below in the [Appendix](#).

Introduction

Discuss relationships of the study to previously published work but do not reiterate or attempt to provide a complete literature survey. The purpose or reason for the research being reported and its significance, originality, or contribution to new knowledge in the field should be clearly and concisely stated. Do not include or summarize current findings in this section.

Experimental and/or Theoretical Methods

General Information. Complicated chemical equations, schemes, and structures should be supplied as artwork, ready for publication. Schemes and charts should be numbered consecutively with Arabic numbers. Capital, lowercase, and Greek letters should be easily discernible or identified if ambiguity might result. Complicated superscripts and subscripts should be avoided. Fractional exponents should be used instead of root signs. [Tables](#), [Figures](#), and [Figure Captions](#) should be embedded within the Experimental/Theoretical Methods section.

Authors should consult a current copy of the Journal and [The ACS Style Guide](#) for examples of style and general recommendations. See also: Mills, I.; et al. *Quantities, Units and Symbols in Physical Chemistry*, 2nd ed.; Blackwell Scientific Publications: Oxford, U.K., 1993.

Hazards. Any unusual hazards in the chemicals, equipment, or procedures used in an investigation should be clearly identified.

Results/Discussion

Results and Discussion may be presented in separate sections or combined into a single section, whichever format conveys the results in the most lucid fashion. The author should discuss the significance of observations, measurements, or computations and should also point out how these contribute to the scientific objectives indicated in the Introduction. [Tables](#), [Figures](#), and [Figure Captions](#) should be embedded within the text.

Conclusions

A brief summary should be given for the principal conclusions of the work.

Appendices

Appendices should only be used when a specific equation or result needs to be derived. Otherwise, authors should use Supporting Information.

Acknowledgment/Dedication

Acknowledgments of financial assistance for the conduct of research, citations of theses, or indications of presentation at a research meeting should be brief and placed in this section. Dedications are not recommended and must reference scientific contributions without being overly personal. Statements deemed inappropriately personal will be removed by the Journal office staff.

Supporting Information Paragraph

If the manuscript is accompanied by any supporting information for publication, a brief description of the supplementary material is required in the manuscript. The appropriate format is:

Supporting Information. Brief statement in nonsentence format listing the contents of the material supplied as Supporting Information.

References

References to the literature should be numbered in one consecutive series by order of appearance in the text, with the text citations presented as non-parenthesized superscript Arabic numbers. Authors should consult [The ACS Style Guide](#) for the appropriate style to use in citations of journal papers, books, and other publications. References will be linked to various electronic sources (e.g., the corresponding abstract from Chemical Abstracts Service, full text from other American Chemical Society Journals, etc.); therefore, the accuracy of references is critical. Authors are responsible for the accuracy of the references. It is the responsibility of the Author(s) to ensure that cited references have not been retracted.

Unnecessarily long lists of references, including excessive self-citation, should be avoided; however, authors must provide references to all relevant publications in which portions of the present work have appeared. [Citation of recent papers published in physical chemistry and chemical physics journals that highlight the significance of the work to the general readership is encouraged.](#)

Journal references should contain author names, article title (preferably in Title Case), abbreviated journal title, year, volume, and pages (first–last):

McMahon, D. P.; Cheung, D. L.; Troisi, A. Why Holes and Electrons Separate So Well in Polymer/Fullerene Photovoltaic Cells. *J. Phys. Chem. Lett.* **2011**, 2, 2737–2741.

For work published online (e.g., ASAP), the DOI should be furnished in addition to the standard bibliographic information. The DOI is an accepted form of citation before and after the article appears in an issue.

Brown, A.; Ngai, T. Y.; Barnes, M. A.; Key, J. A.; Cairo, C. W. Substituted Benzoxadiazoles as Fluorogenic Probes: A Computational Study of Absorption and Fluorescence. *J. Phys. Chem. A* **2011**, DOI: 10.1021/jp2079296.

Book references should contain author names, book title (written in title case), publisher, city, and year:

Datta, S. *Electronic Transport in Mesoscopic Systems*; Cambridge University Press: Cambridge, U.K., 1995.

References with more than 10 authors should list the first 10 authors followed by “et al.” The complete author list may also be put into Supporting Information.

In literature references, journal abbreviations should be those used by Chemical Abstracts Service [see *Chemical Abstracts Service Source Index (CASSI) 1907–2004*]. For references to *JPC A/B/C*, part A, B, or C must be specified for papers published in 1997 forward.

Additional data and peripheral discussion should be placed in the Supporting Information (SI) rather than in the References. Supplementary references may be placed in Supporting Information. Submitted papers should not depend on unpublished material, and excessive reference to material in press or reports not readily found in research libraries is discouraged. If pertinent references are in press or unpublished for any reason, upload copies of the references as Supporting Information for Review Only to enable Reviewers to evaluate the manuscript. Papers accepted for publication are cited as “in press”; the DOI should be given if the paper is published online. Note that the use of unpublished work by others requires their permission.

Tables

Tables should be numbered consecutively with Arabic numbers. Preferably, each table should be embedded in the manuscript after it is first referenced. Alternatively, they can be put at the end of the manuscript. Each table must have a brief title that describes its contents. The title should be understandable without reference to the text. Details should be put in footnotes, not in the title. Tables should be used when the data cannot be presented clearly as narrative, when many numbers must be presented, or when more meaningful interrelationships can be conveyed by a tabular format. Tables should supplement, not duplicate, information presented in the text and figures. Tables should be simple and concise.

Column headings should be lowercase, except for symbols and proper names. Define nonstandard abbreviations in footnotes. Footnotes in tables should be given letter designations and be cited in the table by italic superscript letters. The sequence of letters should proceed by line rather than by column. If a reference is cited both in the text and in a table, a lettered footnote that refers to the numbered reference in the text should be inserted in the table.

In setting up tables, authors should keep in mind the area of the Journal's page (17.8 cm × 25.0 cm) and the column width (8.5 cm) and should make tables conform to the limitations of these dimensions.

Figure Captions

A caption giving the figure number and a brief description, preferably only one or two sentences, must be included for each figure. Do not use color in the captions. If color is necessary, include a key in the artwork itself.

Figures

All figures must be mentioned in the text in consecutive order and must be numbered with Arabic numbers. Preferably, each figure should be embedded in the manuscript following the first reference to the figure. It is also possible to put figures at the end of the manuscript. If symbols are used, it is preferable to place a key in the artwork itself, not in the caption. Ensure that any symbols and abbreviations used in the text agree with those in the figures. See more detailed information on submission of graphics under [Artwork](#) below.

Table of Contents (TOC) Image

A TOC graphic is required for Articles, Feature Articles, and Review Articles. TOC graphics will appear only in the Web edition of the journal and will also be published in the Abstract of the manuscript. The illustration should capture the Reader's attention and, in conjunction with the manuscript title, give the Reader a quick visual impression of the essence of the paper without providing specific results. The graphic should be in the form of a structure, graphical image, photograph, reaction scheme, or equation. Photos of people are not allowed. The author must submit the graphic in the actual size to be used for the TOC, fitting in an area no larger than 3.25 in. × 1.75 in. (approx. 8.5 cm × 4.75 cm). Larger images will be reduced to fit within those dimensions. The type size of labels and other symbols within the graphic must be legible. Tables and spectra are not acceptable. Provide the TOC graphic upon submission of the paper as the last page of the manuscript.

Author Biographies

Feature Articles and Review Articles include a brief biography for each author of the paper. Biographies should contain approximately four to five sentences describing the author's education, previous and current positions, and scientific interests. Photograph(s) are optional but welcome. Photos of authors posed individually are acceptable; however, if more than five authors wish to include photographs, a group picture is required. Biographies (and photographs) are to be submitted as part of the manuscript.

Preparing and Submitting Manuscripts Using TeX/LaTeX

Authors who submit manuscripts composed in TeX/LaTeX should submit a PDF file of the manuscript along with the native TeX/LaTeX manuscript package as a ZIP Archive. Use of the freely available **achemso style package** to help prepare your submission is strongly encouraged. The **achemso** package provides the official macros (**achemso.cls**) and BibTeX styles (**achemso.bst** and **biochem.bst**) for submission to ACS journals. The package and instructions are available from [CTAN, the Comprehensive TeX Archive Network](#). For complete information on submitting TeX/LaTeX files, see [Preparing and Submitting Manuscripts Using TeX/LaTeX](#).

ORCID

All authors are encouraged to register for an ORCID iD, a unique researcher identifier. With this standard identifier, you can create a profile of your research activities to distinguish yourself from other researchers with similar names and make it easier for your colleagues to find your publications. Learn more at <http://www.orcid.org>.

Authors and reviewers can add their ORCID iD to, or register for an ORCID iD from, their account in ACS Paragon Plus. Submitting authors have the option to provide existing ORCID iDs for coauthors during submission, but they cannot create new ORCID iDs for coauthors.

Data Management and Reporting of Raw Data

Authors are encouraged to report all data that are either necessary for reproduction of results or are reported in the manuscript's figures, charts, and tables as Supporting Information (SI). Per ACS policy, the SI is immediately publicly available free of charge on the internet upon publication, regardless of whether or not the accompanying article is made open access. We note that the Journal Publishing Agreement, which is available online, provides for a nonexclusive copyright held jointly between the ACS and the authors.

ARTWORK

General Considerations

All graphics must be created in digital format. Although tiff, jpg, and pdf formats are preferred, a list of all graphic file options may be found on [the ACS Website](#).

In general, graphics should be copied from the graphics program window and pasted directly into the manuscript. The author should make sure that the graphic is at the appropriate resolution (see below) before copying and pasting. The graphics should be resized in the graphics program and then pasted into the manuscript. The author should not resize graphics after they are pasted into a text file. This instruction is true regardless of the graphic format (cds, tif, eps, pdf, etc.). It may help to print the manuscript on a laser printer to ensure all artwork is clear and legible.

Quality

The quality of the graphics in the Journal depends on the quality of the originals provided by the author. Figures cannot be modified or enhanced by the Journal production staff. Images produced from continuous-tone graphics such as photographs should have high contrast. The RGB and resolution requirements are essential for producing high-quality graphics within the published manuscript. Graphics submitted in CMYK or at lower resolutions may be used; however, the colors may not be consistent, and graphics of poor quality may not be able to be improved.

Resolution

Digital graphics pasted into manuscripts should have the following minimum resolution:

Black and white line art	1200 dpi
Grayscale art	600 dpi
Color art (RGB color mode)	300 dpi

Size

Graphics must fit a one- or two-column format on the Journal page. For efficient use of Journal space, single-column graphics are preferred.

	single (preferred)	double
width		
minimum		10.5 cm (4.13 in.)
maximum	8.25 cm (3.25 in.)	17.78 cm (7 in.)
maximum depth	24 cm (9.5 in.)	24 cm (9.5 in.)

For best results, **submit graphics in the actual size at which they should appear in the published version.** Original graphics that do not need to be reduced to fit a single or double column will yield the best quality. Lettering should be no smaller than 4.5 points in the final published format. Helvetica or Arial fonts work well for lettering. Dashed, dotted, and solid lines should be no thinner than 0.5 point. Lettering and lines should be of uniform density and the lines unbroken. If the submitted artwork must be reduced, larger lettering and thicker lines should be used so that, when reduced, the artwork meets the above mentioned criteria.

Avoid using complex textures and shading to achieve a three-dimensional effect. Parallel or cross-hatched lines should be used to fill enclosed areas with a pattern.

Color

The use of color to enhance the clarity of complex structures, figures, spectra, schemes, etc. is encouraged. Color graphics will appear in color in both print and Web products. Color reproduction of graphics will be provided **at no cost to the author.** For manuscripts containing color, a surcharge is added to the standard cost of paper reprints. Graphics intended to appear in black and white or grayscale should not be submitted in color.

Chemical Structures

Structures should be produced with the use of a drawing program such as ChemDraw. Authors using the current versions of ChemDraw will find the necessary parameters incorporated into this program ("ACS Document 1996"). Authors using older versions of ChemDraw should use the following settings:

(1) As drawing settings, select:

chain angle	120°
bond spacing	18% of width
fixed length	14.4 pt (0.508 cm, 0.2 in.)
bold width	2.0 pt (0.071 cm, 0.0278 in.)
line width	0.6 pt (0.021 cm, 0.0084 in.)
margin width	1.6 pt (0.056 cm, 0.0222 in.)
hash spacing	2.5 pt (0.088 cm, 0.0347 in.)

(2) As text settings, select:

font	Arial/Helvetica
size	10 pt

(3) Under the preferences, choose:

units	points
tolerances	5 pixels

(4) Under page setup, choose:

paper	US Letter
scale	100%

(5) Use the ChemDraw ruler or appropriate margin settings to create charts, equations, and schemes with maximum widths of 8.25 cm (one-column format) or 17.8 cm (two-column format). If the foregoing drawing-setting lengths and widths are selected in centimeters rather than in points or inches, the ChemDraw ruler will be calibrated in centimeters.

(6) Copy and paste the graphics into the manuscript text file at the appropriate locations. Do not use the “insert” function.

Authors using other drawing packages should set the program parameters to match the above values as closely as possible.

Schemes

Sequences of reactions are called schemes and should be numbered consecutively with Arabic numbers. Schemes may have brief titles describing their contents and footnotes, if needed, for further detail.

Charts

Groups of structures that do not show reactions are called charts and should be numbered consecutively with Arabic numbers. Charts may have brief titles describing their contents and footnotes, if needed, for further detail.

Cover Art

Cover art images may be submitted with any type of manuscript, although publication preference will be given to Feature Articles, Review Articles, and Articles that review very favorably and manuscripts by authors who review regularly for the journal. All authors are encouraged to submit images for consideration as cover art. Cover images must capture the importance and excitement of the science discussed within the manuscript while also being “eye-catching” and aesthetically appealing. Submitted images are approved by the Managing and Deputy Editors. Cover images approved for publication may be modified by the ACS graphic artist pending the Author’s final approval. Images to be considered for the cover must be approximately 8 in. × 8 in. (20.32 cm × 20.32 cm) with a minimum of 300 dpi resolution (2400 × 2400 pixels, ~10 MB in file size). Do not reduce the image size or resolution when uploading it into ACS Paragon Plus. Preferred image files are eps, tif, jpg, and png (not pdf). Cover art files should be submitted as Supporting Information for Review Only. Images chosen for the cover will be published at **no cost to the author**.

Web-Enhanced Objects

The Journal encourages the submission of Web-enhanced objects (WEOs) for the presentation of graphical results that go beyond conventional print publication capabilities, including 3D rotatable figures, animations, spectra, video, and sound. Links to WEOs will appear in the Web HTML version of the paper. Files suitable for this form of publication should be viewable with commonly available Internet plug-ins (e.g., Chime) or helper applications (Rasmol, Mercury, etc.). Authors should submit WEOs via the ACS Paragon Plus Website as part of their submission and clearly indicate to the Editor that the material is WEO material. Descriptions of WEOs should be noted in the appropriate places within the graphic caption or text of the paper, noting the type of file and format. Example: "A 3D rotatable image in xyz format is available." For more information, go to <http://pubs.acs.org/page/4authors/submission/weo.html>.

ASSISTANCE WITH ENGLISH LANGUAGE EDITING

Authors may want to have their manuscripts edited professionally before submission to improve clarity. The ACS ChemWorx English Editing Service can assist you in improving and polishing the language in your manuscript. You can learn more about the services offered, at <http://es.acschemworx.acs.org>.

SUBMISSION OF MANUSCRIPTS

Manuscripts must be submitted via the ACS Paragon Plus Environment (<http://paragonplus.acs.org/login>). Complete instructions and an overview of the electronic online submission process are available through the secure ACS Paragon Plus website. Authors must also submit all revisions of manuscripts via the ACS Paragon Plus Environment. The online submission site employs state-of-the-art security mechanisms to ensure that all electronically submitted papers are secure. These same security mechanisms are utilized throughout the peer review process and permits access only to Editors and Reviewers who are assigned to a particular paper.

Authors whose manuscripts are published in the Journal will be expected to review manuscripts submitted by other researchers from time to time.

In addition to the information requested by the ACS Paragon Plus submission system, all manuscripts must be accompanied by a **cover letter** that contains **clear and precise** information about the submission. Please use official letterhead of the author's affiliation that lists the telephone number, fax number, and e-mail address. The cover letter must include all of the following points:

- Manuscript title.
- Authors, including the full names (preferred), titles, and positions of ALL authors (undergraduate or graduate student, post-doc, professor, etc.). All authors must have accounts in ACS Paragon Plus. The corresponding author must be a Senior author (Professor, Research Associate, or similar), not a student. Please list corresponding author's name, address, telephone number, and current institution e-mail address.
- Manuscript type (Article, Feature Article, Review Article, Comment, Special Issue, or Addition/Correction).
- Journal Part and Section that is most appropriate for your manuscript based on scope. [Please note that the final decision on Journal Part and Section remains with the Editors.]

- **Explanation of the manuscript's significance, including its originality, new physical insights, and contribution to new knowledge in the field.**
- Notification if manuscript contains a dedication statement.
- List of at least three to five recommended Reviewers for the manuscript. Include the institution, telephone number, and e-mail addresses for each suggested Reviewer.

When submitting manuscripts in ACS Paragon Plus, authors should do the following:

- Ensure that the Journal Part and Section match. [Please note that the final decision on journal Part and Section remains with the Editors.]
- List all authors and correct title (e.g., undergraduate student, graduate student, Post Doc, Research Associate, Professor) in ACS Paragon Plus with correct e-mail address. Duplicate e-mails are not permitted.
- List all authors on the manuscript correctly with current and accurate e-mail addresses for each. It is essential to provide correct e-mail addresses for Coauthors because ACS Paragon Plus will notify these authors via e-mail that the manuscript has been submitted. Entering inaccurate e-mail addresses will delay the review process if Coauthors cannot be contacted. Secondary e-mail addresses are encouraged to prevent delays. Use of fictitious e-mail addresses will be considered an ethical violation.
- Ensure that all Coauthors are aware of the submission. [See [Ethics](#) section for details.]
- If the manuscript is written in Microsoft Word, turn off the "Line Numbers and Track Changes" feature (after accepting or rejecting all changes) before uploading into ACS Paragon Plus.
- Check that the manuscript type matches the designation in the cover letter.
- Accurately answer custom questions about prior submission history.
- Make sure that the references are formatted correctly.
- Include a Table of Contents Graphics image. TOCs should not contain offensive material, and copyright permission will be requested if material has been published elsewhere.

Patent Activities and Intellectual Property Issues. Authors are responsible for ensuring that all patent activities and intellectual property issues are satisfactorily resolved prior to first publication (Just Accepted, ASAP, or in an issue). Acceptance and publication will not be delayed for pending or unresolved issues of this nature.

Funding Sources. When submitting a manuscript to the Journal via ACS Paragon Plus, the submitting author is asked to identify the funding sources for the work presented in the manuscript. Identifying funding sources is optional during submission of an original manuscript. Funding source information is required when a revised manuscript is submitted. Funding sources can be selected from the list of agencies included in the FundRef Registry <http://www.crossref.org/fundref/>.

ETHICS

Multiple Reporting of Research. It is improper for an author to simultaneously submit manuscripts describing essentially the same research to more than one journal.

Plagiarism. The Editors of *JPC A/B/C* do not tolerate plagiarism. This includes the verbatim copying of previously published work of other authors and/or of the same author. Please contact

the Editors if there are questions about avoiding plagiarism. The ACS plagiarism policy is included in the [ACS Ethical Guidelines](#). In publishing only original research, ACS is committed to deterring plagiarism, including self-plagiarism. ACS Publications uses CrossCheck's iThenticate software to screen submitted manuscripts for similarity to published material. Note that your manuscript will always be screened during the revision process. Further information about plagiarism can be found in Part B of the [Ethical Guidelines to Publication of Chemical Research](#).

Coauthorship. The submitting author must obtain consent of co-authorship from all listed Coauthors prior to submitting the manuscript and must include as Coauthors all individuals who made significant scientific contributions to the work. Any disagreement between the corresponding author and Coauthor(s) after submission will cause review of the manuscript to cease. Removal or addition of Coauthor(s) after submission of the manuscript requires confirmation in writing by the respective Coauthor(s). Guidelines for authorship are available with the Committee on Publication Ethics (COPE).

Conflict of Interest Disclosure. A statement describing any financial conflicts of interest or lack thereof is published with each manuscript. During the submission process, the corresponding author must provide this statement on behalf of all authors of the manuscript. The statement should describe all potential sources of bias, including affiliations, funding sources, and financial or management relationships, that may constitute conflicts of interest (please see the [ACS Ethical Guidelines](#)). The statement will be published in the final article. If no conflict of interest is declared, the following statement will be published in the article: "The authors declare no competing financial interest."

The complete document "Ethical Guidelines to Publication of Chemical Research" is available at http://pubs.acs.org/ethics .
--

Information on the ACS Journal Publishing Agreement may be found below in the section entitled "[Journal Publishing Agreement](#)" and at <http://pubs.acs.org/page/4authors/jpa/index.html>.

Author List. During manuscript submission, the submitting author must provide contact information (full name, e-mail address, institutional affiliation, and mailing address) for all of the Coauthors. Because all of the author names are automatically imported into the electronic Journal Publishing Agreement, the names must be entered into ACS Paragon Plus in the same sequence as they appear on the first page of the manuscript. (Note that Coauthors are not required to register in ACS Paragon Plus in advance.) The author who submits the manuscript for publication accepts the responsibility of notifying all Coauthors that the manuscript is being submitted. Deletion or addition of an author after the manuscript has been submitted requires a confirmation letter to the Editor-in-Chief from the author whose name is being deleted or added, respectively. For more information on ethical responsibilities of authors, see the [Ethical Guidelines to Publication of Chemical Research](#).

EDITORIAL PEER REVIEW PROCESS

The Editors may exercise their prerogative to reject a manuscript without peer review if that paper is judged to be outside the scope of the Journal, poorly written or formatted, fragmentary and marginally incremental, lacking in significance, or containing no obvious new physical insight.

All submitted manuscripts are reviewed and handled by the Editor-in-Chief, Deputy Editors, and/or Senior Editors. The Senior Editor and his or her Editorial Assistant are then responsible for the assigned manuscripts, including acknowledging receipt, evaluating the content of the paper, selecting Reviewers, monitoring the progress of the review process, evaluating the comments of Reviewers and forwarding them to the authors for their response, communicating ultimate acceptance or rejection to the corresponding author, carrying out a final check of accepted manuscripts for appropriate format and style, and forwarding accepted manuscripts to the publications office.

The Editors seek the scientific advice of Reviewers who are active in the research area covered by the manuscript. The Reviewers act only in an advisory capacity, and the final decision concerning a manuscript is the responsibility of the Editors. The Reviewers are asked to comment not only on the scientific content but also on the manuscript's suitability for *JPC A/B/C*. All reviews are anonymous, and the reviewing process is most effective if Reviewers do not reveal their identities to the authors. An exception arises in connection with a manuscript submitted for publication in the form of a Comment on the work of another author. Under such circumstances, the author whose work is being commented on will, in general, be allowed to review the communication and to write a Reply if deemed necessary. The Reply and the original communication will be "refereed" and, if accepted, will be published together in the same issue.

A manuscript sent back to an author for revision should be returned to the Editor without delay. Manuscripts that are not returned by the date given in the Editor's decision letter will expire. When a manuscript expires, it will no longer be available on the author's Paragon Plus homepage. When this occurs, the revised manuscript must be resubmitted as a new submission. The cover letter should indicate the previous manuscript number and offer a response to the comments of the Reviewers. The manuscript will be processed as a revision with a new manuscript number and date of submission.

Revised manuscripts are generally sent back to the original Reviewers, who are asked to comment on the revisions. If only minor revisions are involved, the Editor may examine the revised manuscript in light of the recommendations of the Reviewers without seeking further opinions. The author should provide a cover letter with the revised manuscript containing responses to all of the Reviewers' comments and detailing, in a point-by-point manner, the revisions to the manuscript. The dates of receipt of the original and the revised manuscripts will both appear in publication. If using highlighting, bolding, italics, or markings of any kind to indicate changes made in response to the reviews of your manuscript, we ask that you upload the marked-up copy as "Supporting Information for Review Only" and provide an unmarked version as the official revised manuscript submission.

Transfer of Manuscripts from *J. Phys. Chem. Lett.*

Manuscripts that are submitted to the *Journal of Physical Chemistry Letters* may be deemed unsuitable for the Journal but scientifically sound such that they may merit publication in *JPC A/B/C*. In these cases, the Editor of *JPC Letters* may directly transfer the manuscript in ACS Paragon Plus with all author-submitted information and reviews (if the manuscript is transferred after external review) to *JPC A/B/C* with the permission of the Authors.

The Editors of *JPC A/B/C* have the discretion of requesting a new round of peer review prior to making a decision to accept. Note that transfer of the manuscript does not guarantee acceptance.

All formatting requirements for *JPC A/B/C* must be met, including the change from Letter to Article format and the inclusion of a revised cover letter, prior to any action by the Editors of *JPC A/B/C*.

JUST ACCEPTED MANUSCRIPTS

Just Accepted manuscripts are peer reviewed, accepted manuscripts that are posted on the ACS Publications Website prior to technical editing, formatting for publication, and author proofing—usually within 30 minutes to 24 hours of acceptance by the editorial office. During the manuscript submission process, authors can choose to have their manuscript posted online as a *Just Accepted* manuscript. Note that *Just Accepted* manuscripts are considered to be “published” and fully citable by their DOI. To ensure rapid delivery of the accepted manuscript to the Web, authors must adhere carefully to all requirements in the journal’s Author Guidelines. **Authors should use care when reviewing their manuscript PDF before submission, because, if the author chooses to have the manuscript published as a *Just Accepted* manuscript, the PDF will be published immediately upon acceptance and cannot be changed. The author will subsequently receive [final page proofs](#) which can accommodate minor corrections.** For further information, please refer to the *Just Accepted* FAQ, at <http://services.acs.org/pubshelp/passthru.cgi?action=kb&item=244>. Note that publishing a manuscript as *Just Accepted* is not a means by which to comply with the [NIH Public Access Mandate](#).

ASAP PUBLICATION

Accepted manuscripts will be published on the “Articles ASAP” page on the Journal Website as soon as page proofs are corrected and all author concerns are resolved. Publication on the Web usually occurs within 4 working days of receipt of page proof corrections, and this can be anywhere from 3 to 5 weeks in advance of the cover date of the issue. [Manuscripts assigned to a Special Issue often remain published ASAP for several months.](#) The actual date on which an accepted paper is published on the Web is recorded on the Web version of the manuscript and on the first page of the PDF version.

SUPPORTING INFORMATION

Extensive tables, graphs, spectra, calculations, detailed experimental methodology, and other material beyond a modest content in the published paper may be included as Supporting Information (SI) for Publication. SI is uploaded as separate files (file designation Supporting Information for Publication) during the manuscript submission process and must not be included or duplicated in the manuscript. Edit traces and highlighting (color, italic, bold) to identify revisions must be removed before uploading. The manuscript title and authors’ names and affiliations should be provided on the first page of SI. All pages should be numbered consecutively starting with page S1. The list of supported file types for SI can be found at <http://pubs.acs.org/page/4authors/submission/software.html>. Zip compression may be used on large files prepared in the acceptable formats to speed transfer time. Files prepared in any other software must be provided in PDF format. Files will be renamed to a standard format for publication so specific identification should be included in the file content. SI will be made available free of charge on the Web and can be accessed separately on the Web by Readers.

Figures and tables that will appear in the published article are to be inserted [directly in the main body of the manuscript, and not included in the Supporting Information.](#)

GENERAL INFORMATION

Reproducibility of results: It is essential that papers provide enough information so that calculations can be reproduced by others. Manuscripts that report the results of electronic structure calculations should follow the guidelines in J. E. Boggs (*Pure Appl. Chem.* **1998**, 70, No. 4, 1015–1018; <http://dx.doi.org/10.1351/pac199870041015>). Manuscripts that present force field parameters and other potential energy surface information should follow the guidelines in D. J. Raber and W. C. Guida (*Pure Appl. Chem.* **1998**, 70, No. 10, 2047–2049; <http://dx.doi.org/10.1351/pac199870102047>). Both sets of guidelines can be viewed online at <http://iupac.org/publications/pac/reports/year/1998/>.

Guidelines for Structural Data

Authors are required to provide crystallographic or surface structure data as Supporting Information in crystallographic information file (CIF) format.

Nomenclature

Registered trademark names should be capitalized whenever used. Trade and trivial names should not be capitalized. Trademark and registered symbols should not be used. The chemical name or composition should be given in parentheses or in a reference at the first occurrence of such a name. Nomenclature should conform to current American usage. Insofar as possible, authors should use systematic names similar to those used by Chemical Abstracts Service and the International Union of Pure and Applied Chemistry.

Chemical Abstracts (CA) nomenclature rules are described in Appendix IV of the *Chemical Abstracts Index Guide*. For CA nomenclature advice, consult the Manager of Nomenclature Services, Chemical Abstracts Service, P.O. Box 3012, Columbus, OH 43210-0012. A name generation service is available for a fee through CAS Client Services, 2540 Olentangy River Road, P.O. Box 3343, Columbus, OH 43210-0334; phone, (614) 447-3870; fax, (614) 447-3747; or e-mail, answers@cas.org.

ACS PARAGON PLUS TIPS

- Word documents and PDFs should contain everything, including Figures and Figure Captions, but not Supporting Information.
- Manuscripts will expire if a revision is not returned by the date in the Editor's decision letter. Once expired, it will no longer appear on the author's Paragon Plus homepage, and the revision must be uploaded as a new manuscript.
- Do not use inaccurate or fictitious e-mail addresses because it may delay the review process for the manuscript. Use of fictitious e-mail addresses will be considered an ethical violation.
- Contact the Help Desk (support@services.acs.org) for problems or questions concerning Paragon Plus or its use. Hours: 12 a.m. (midnight) to 8 p.m. EST/EDT Monday through Friday (excluding holidays). Phone: 1-800-227-9919 or 202-872-4357.

REVISIONS AND RESUBMISSIONS

For Revisions:

- Clearly identify the manuscript as a revision; reference the manuscript number in the cover letter.

- Include an itemized list of changes to the manuscript, with a response to each comment made by the Editor and by each Reviewer.
- Be aware that the manuscript may be sent for additional review.
- Return revision by the date given in the Editor's decision letter or the manuscript will expire.

For Resubmissions:

- Clearly identify the manuscript as a resubmission; reference the previous manuscript number in the cover letter.
- Include an itemized list of changes to the manuscript, with a response to each comment made by the Editor and by each Reviewer.

JOURNAL PUBLISHING AGREEMENT

A properly completed and signed Journal Publishing Agreement must be submitted for each manuscript. ACS Paragon Plus provides an electronic version of the Agreement that will be available on the **My Authoring Activity** tab of the corresponding author's homepage once the manuscript has been assigned to an Editor. A PDF version of the Agreement is also available, but **authors are strongly encouraged to use the electronic Journal Publishing Agreement**. If the PDF version is used, **all pages of the signed PDF Agreement must be submitted**. If the corresponding author cannot complete either the electronic or PDF version for any reason, another author should complete and sign the PDF version of the form. Forms and complete instructions are available at <http://pubs.acs.org/page/copyright/journals/index.html>.

PERMISSIONS

To get permission to reproduce material (tables, figures, graphs, photographs, artwork), contact the copyright holder, giving complete information, to receive permission in writing. Most often the copyright holder is the publisher. Ask for the person who handles copyright permissions. Permission should be in writing and dated. For permission request information for papers published in ACS Journals, see <http://pubs.acs.org/page/copyright/permissions.html>.

PROOFS AND REPRINTS

Proofs

The corresponding author of an accepted manuscript will receive e-mail notification and complete instructions when page proofs are available for review via a secure Website. **Authors will access the secure site through ACS ChemWorx and will need an ACS ID. To obtain an ACS ID or to reset your password, go to www.acschemworx.org**. No paper is released for publication until an author's corrected proof has been returned. The attention of the authors is directed to the instructions that accompany the proof. **Special attention should be given to correct presentation of the author names, author queries in the edit trace, and confirmation of the Supporting Information for publication**. Proofs should be checked against the manuscript and returned as soon as possible. Routine rephrasing of sentences or additions are not permitted at the page proof stage. Alterations should be restricted to serious changes in interpretation or corrections of data. Corrections to Supporting Information require new, complete SI files. Supporting Information is not edited/corrected by the Journal production staff. Extensive or important changes on page proofs, including changes to the title or to the list of authors and addition or revision of

references, are subject to Editorial review. Revised or new Supporting Information may require Editorial Review.

It is the responsibility of the corresponding author to ensure that all authors listed on the manuscript agree with the changes made on the proofs. Galley proofs should be returned within 48 hours of receipt in order to ensure timely publication of the manuscript.

ACS Policies for E-prints, ACS AuthorChoice Open Access, and Reprints

Under the [ACS Articles on Request policy](#), the Society will provide (free of charge) to all contributing authors a unique URL within the ACS Website that they may e-mail to colleagues or post on external Websites. These author-directed links are designed to facilitate distribution of an author's published work to interested colleagues in lieu of direct distribution of the PDF file by the author. The ACS Articles on Request policy allows 50 downloads within the first year after Web publication and unlimited access via the same author-directed links 12 months after Web publication. For more details on ACS Articles on Request, please visit <http://pubs.acs.org/page/policy/articlesonrequest/index.html>.

[ACS AuthorChoice](#) options establish fee-based mechanisms for authors or their research funding agencies to sponsor the open availability of final published articles on the Web. ACS *AuthorChoice* offers authors a wide range of open access license options, such as Creative Commons licenses and provisions for immediate or 12-month embargoed open access, and includes [ACS Certified Deposit](#). Authors will find useful information about compliance with open access policies available [here](#) and FAQs [here](#). Corresponding authors who published with ACS during 2014 may have access to [ACS Author Rewards](#), a \$60M stimulus program ACS provided to help authors transition to new open access publishing models.

Authors must sign the Journals Publishing Agreement. Forms and complete instructions are available [here](#). After acceptance, authors will be presented with the opportunity to purchase an *ACS AuthorChoice* option, and authors who do so will be presented with the appropriate license at that time. For a review of all license options available, see [here](#). For questions or further assistance with *ACS AuthorChoice*, please reach out to support@services.acs.org.

For paper reprints, when authors are sent the proof of their paper, they will receive a link to a Website where they may order author reprints. They may also call Cierant Corporation (866-305-0111 from 9 a.m. to 5 p.m. EST). Reprints will be shipped within two weeks after the issue publication date. Neither the Editors nor the Washington ACS Office keeps a supply of reprints; requests for single copies of papers should be addressed to the corresponding author of the paper concerned.

APPENDIX: Examples of Abstracts

One or two sentences providing background on the problem.

Two or three sentences summarizing the methodology and results.

A concluding sentence highlighting the significance of the study.

Nitrogen oxides, including nitrogen dioxide and nitric acid, react with mineral dust particles in the atmosphere to yield adsorbed nitrate. Although nitrate ion is a well-known chromophore in natural waters, little is known about the surface photochemistry of nitrate adsorbed on mineral particles. In this study, nitrate adsorbed on aluminum oxide, a model system for mineral dust aerosol, is irradiated with broadband light ($\lambda > 300$ nm) as a function of relative humidity (RH) in the presence of molecular oxygen. Upon irradiation, the nitrate ion readily undergoes photolysis to yield nitrogen-containing gas-phase products including NO₂, NO, and N₂O, with NO being the major product. The relative ratio and product yields of these gas-phase products change with RH, with N₂O production being highest at the higher relative humidities. Furthermore, an efficient dark reaction readily converts the major NO product into NO₂ during post-irradiation. Photochemical processes on mineral dust aerosol surfaces have the potential to impact the chemical balance of the atmosphere, yet little is known about these processes. In this study, the impact that adsorbed nitrate photochemistry may have on the renoxification of the atmosphere is discussed. (*J. Phys. Chem. A* **2009**, *113*, 7818–7825).

Polymer-fullerene bilayer heterostructures are suited to study excitonic processes in conjugated polymers. Excitons are efficiently quenched at the polymer-fullerene interface, whereas the polymer-vacuum interface is often considered as an exciton-reflecting interface. Here, we report about efficient exciton quenching close to the polymer-vacuum interface of spin-coated MDMO-PPV (poly[2-methoxy-5-(2'-ethyl-hexyloxy)-*p*-phenylenevinylene]) films. The quenching efficiency is estimated to be as high as that of the polymer-fullerene interface. This efficient quenching is consistent with enhanced intermolecular interactions close to the polymer-vacuum interface due to the formation of a "skin layer" during the spin-coating procedure. In the skin layer, the polymer density is higher; that is, the intermolecular distances are shorter than in the rest of the film. The effect of exciton quenching at the polymer-vacuum interface should be taken into account when the thickness of the polymer film is on the order of the exciton diffusion length; in particular, in the determination of the exciton diffusion length. (*J. Phys. Chem. B* **2009**, *113*, 9104–9109).

Nanostructured metallic architectures have unique and highly attractive properties, including large optical field enhancements resulting in strong light scattering and absorption. Modification of prefabricated nanostructures by simple galvanic displacement (GD) allows for the design of new nanomaterials with enhanced optical properties. In this paper, we have studied the optical properties of two families of Ag fractals before and after GD in a Au(III) solution. The new nanomaterials showed significantly improved optical enhancing properties that allowed for straightforward and highly reproducible single-molecule detection by surface-enhanced resonance Raman scattering (SERRS). (*J. Phys. Chem. C* **2009**, *113*, 12897–12900).
